i COVERS AND DOORS

Every tank has multiple openings. This could function as an entrance or exit for the product, but also the a passage for maintenance or inspection. Regarding the function of the opening and the purpose of the tank, the valves can be divided into 4 groups: Covers, hatches, bottom valves and sampling valves.

Covers: are build in the top of the tank. These could be pressure covers or no-pressure covers. Covers are meant as a entrance for persons, inspection or the possibility to add some additives to the product.

Doors: (also covers) are mounted on the sides of the tank or machine and are often mounted below the level of the content of the tank. This is because they are meant to reach a certain pressure.

Hatches are often used as a entrance to the inside of a tank or machine.

Per application the offer is to divide into:

Pharma	Manhole Covers	> Pressure covers (round) > Non-pressure covers (round)
Food	Manhole Covers	> Pressure covers (round and oval) > Non pressure covers (round) > Inspection covers (round, oval and rectangular)
	Manway door	> Pressure covers (round and oval) > Non pressure covers (round, oval and rectangular) > Inspection covers (round, oval and rectangular)
Industrial	Manhole Covers	> Pressure covers (round and oval) > Non-pressure covers (round) > Inspection covers (round, oval and rectangular)
	Manway door	> Pressure covers (round and oval) > Non pressure covers (round) > Inspection covers (round, oval and rectangular)

As you can read, the covers and doors can be delivered with various options, or multiple versions

ROUND PRESSURE MANHOLE COVERS

For tanks or storage rooms under pressure, S.K.S. offers a wide range of pressure manhole covers. These manhole covers are often mounted at the top of the tank.

Because these manholes are equipped with robust locks in combination with stainless steel hand wheels, they are very suitable for various pressure applications.

The covers are available in different versions and sizes. For example, an inspection door which can be used for visual inspection.

Besides the manhole covers the bottom of the tanks are often provided with an tank outlet . For all applications S.K.S. has a solution. Check our website for all tank outlet valves or contact our product specialists for more information.

OVAL MANWAY DOORS

An oval manway door is usually placed on the side of a tank. Due to the robust stainless steel design in combination with the stainless steel hand wheels, these manway doors are also suitable for pressure applications. The oval manholes can be opened inward and outward and are available in different versions.

To complete the package a sampling valve can be added to the tank in order to take samples. In this way small amounts of product can easily be taken from the tank in order to inspect the product to the set requirements.

MANHOLES

Round manholes are usually placed on the top of the tank. They serve to easily and quickly inspect the contents of your tank. S.K.S. offers a wide range of round stainless steel manholes. The covers are available with different types of handles and various editions.

Whenever a tank needs to be optimally protected against over pressure and/or under pressure such as vacuum S.K.S. has various tank safety systems available. Check our website for all the possibilities or contact one of our product specialists for more information.

RECTANGULAR MANWAY DOORS

As a total supplier, S.K.S. has a large collection of rectangular manway doors. These manway doors are available in various models and editions.

In addition to these manway doors, S.K.S. also offers a wide range of cleaning fixtures. Clean a tank with a spray ball or tank cleaning jet. Get inspired by all the possibilities on the S.K.S. website or contact one of our product specialists for more information.

PIPETITE®

THE HYGIENIC WALL BOOT SYSTEM

“A new approach to an old problem”

The current solutions for pipe connections through walls are visually and hygienically flawed. They often do not seal properly and are not flexible or uniform.

With the Pipetite® program, S.K.S. offers a true solution to this problem. Pipetite® has been developed based on the above practical shortcomings and can therefore be used in any environment. All models are self-sealing, hygienic and easy to fit.

Pipetite® is simple and effective

- 6 sizes for pipe diameters up to 380 mm
- Hygienic white silicone and 316 stainless steel
- Totally self-sealing and maintenance-free
- Vibration-absorbing
- Waterproof
- Resistant to temperatures up to 260°C (medium pipe)
- Quick and easy installation
- Long lifespan

Pipetite is available for wall connections (Pipetite® and ReBoot®), pipe connections (Pipe n Pipe®) or plate connections (Tube Grommets and Hose grommets).

As an option, the Pipetite® range can be made fireproof by using traditional firestop products.

Pipetite® can be used in many common situations. The connector surrounding the pipe is the same for all models. You trim the boot to size and slide the wall connector over the pipe. ReBoot® models can be easily

fitted around the existing situation and are sealed with a clip.

The actual connection with the application for the pipe is different for every model.

- The Pipetite® and ReBoot® can be easily fitted on walls or ceilings.
- The Pipe n Pipe® is made for pipe connections of 4"/NW100 or 6"/NW150.
- Grommets are used for pipe or hose connections through machine walls or stainless steel wall plates up to 3 mm thick. Multi range is available.
- Flat. A flat range for tank or wall boot and cover.

In case you need assistance in choosing the right Pipetite®, please contact us.
