Alfa Laval Unique Mixproof Process

Double Seat valves

Introduction

The Alfa Laval Unique Mixproof Process valve is a versatile, double block-and-bleed valve that enables the simultaneous flow of two products or fluids through the same valve in valve matrices and pipelines without the risk of cross-contamination. This double seat valve with seat lift is a compact, cost-effective version of the premium Alfa Laval Unique Mixproof valve. High cleanability, the ability to withstand pressure peaks and its fit-for-purpose components make this valve a great addition to dairy, food and beverage applications. It comes in various sizes to meet your fundamental hygienic processing requirements.

Applications

The Alfa Laval Unique Mixproof Process is designed for continuous flow management and process safety in hygienic processes where product safety is at the top of the agenda across the dairy, food, beverage and many other industries.

Benefits

- Get the product safety you need by eliminating the risk of cross-contamination and product loss while ensuring efficient cleaning
- Enhance the reliability and flexibility of your process setup with proven valve technology tailored to your specific production needs, minimize the risk of unplanned downtime while spending as little time and resources as possible on routine maintenance
- Limit your environmental impact with significantly reduced water and CIP media consumption, no spillage and eliminated product loss
- Predefined and available in various sizes to meet your fundamental hygienic processing requirements

Standard design

The valve comprises a series of base components, including a proven valve body, valve plug and seals, maintenance-free actuator, and seat lift cleaning. Leakage detection holes enable visual inspection without requiring valve disassembly, alerting operators of the need for parts wear replacement. Few straightforward, moveable parts contribute to reliable operation and reduced maintenance costs. The valve can also be fitted with an Alfa Laval ThinkTop sensing and control unit.

Working principles

The Alfa Laval Unique Mixproof Process valve is a normally closed (NC) valve controlled remotely using compressed air. The valve has two independent plugs and seals to separate the liquids; the space between the seals forms a leakage chamber at atmospheric pressure under every operating condition. Leakage rarely occurs, but should it happen, the product flows into the leakage chamber and drains through the outlet at the bottom of the chamber for easy detection.

When the valve is open, the leakage chamber is closed. The product then flows from one line to the other. The well-known radial design of the valve ensures that virtually no product spillage occurs during valve operation.

Technical Data

Pressure		
Max. product pressure:		1000 kPa (10 bar) / 145 psi
Min. product pressure:		Full Vacuum
Air pressure range:		600-800 kPa (6-8 bar) / 87-116 psi

Temperature		
Temperature range:	EPDM	-5 °C to +125 °C / 23 °F to 257 °F
	HNBR	-5 °C to +125 °C / 23 °F to 257 °F

ATEX	
Classification:	II 2 G D[1]

[1] This equipment is outside the scope of the directive 2014/34/EU and must not carry a separate CE marking according to the directive as the equipment has no own ignition source

Physical Data

Materials	
Product wetted steel parts:	1.4404 (316L)
Other steel parts:	1.4301 (304)

Surface finish	
External (semi-bright):	Ra< 1.6 µm / Ra< 64 µi
Internal (polished):	Ra< 0.8 µm / Ra< 32 µi

Product wetted seals	
Sealing Material:	EPDM, FPM, HNBR

Other seals	
Actuator seals:	NBR
Guide strip:	PTFE
