EU Declaration of Conformity for Valves and Valve Manifolds

SPX Flow Technology Germany GmbH
Gottlieb-Daimler-Str. 13, D-59439 Holzwickede
herewith declares that

APV double seal valves of the series SD4 ATEX design
in the nominal diameters DN 25 – 100, 1“ – 4“

meet the requirements of:

Machinery Directive 2006/42/EC
(superseding 89/392/EEC and 98/37/EC)
Equipment and Product Safety Act GPSG - 9.GPSGV
and

Directive on the Protection against Explosion 2014/34/EU ATEX (superseding 94/9/EC)
for Equipment Category -/2G IIB TX

For official inspections, SPX FLOW presents
a technical documentation according to Appendix VII of the Machinery Directive,
this documentation consisting of documents of the development and construction,
description of measures taken to meet the conformity and to comply with
the basic requirements on safety and health, incl. an analysis of the risks,
an analysis of ignition hazards as well as an instruction manual with safety instructions.

The conformity of the valves is guaranteed.

An ATEX documentation is lodged at the notified body DEKRA EXAM GmbH
in Bochum, Germany (No. 0158).

Authorised person for the documentation:
Frank Baumbach

SPX Flow Technology Germany GmbH
Gottlieb-Daimler-Str. 13, D-59439 Holzwickede, Germany

1. General Terms

This instruction manual applies for DELTA SD4 double seal valves in the nominal dimensions DN25-100, 1"-4" for use in specific ATEX applications (according to Directive 2014/34/EU).

The valve must only be assembled, disassembled and reassembled by persons who have been trained in APV valves or by SPX FLOW service team members. If necessary, contact your local SPX FLOW representative.

This instruction manual must be read and observed by the responsible operating and maintenance personnel.

We point out that we will not accept any liability for damage or malfunctions resulting from the non-compliance with this instruction manual.

Descriptions and data given herein are subject to technical changes.

1.1. Symbols

This symbol draws your attention to important directions which have to be observed with regard to the operation in explosive areas.

This technical safety symbol draws your attention to important directions for operating safety. You will find it wherever the activities described are bearing health hazards or risks for persons or material assets.

1.2. Responsibility for ATEX certification - scope of supply

SPX FLOW will be held responsible only for the valves supplied and selected according to the operating conditions indicated by the customer or end user and as stated in the order confirmation. If in doubt, contact your local supplier.

All other assembled equipment and devices must have a separate certification of at least the same or higher grade of protection as the valve, provided by the supplier(s) of that equipment and devices. The complete unit must be certified separately by the final assembling manufacturer and must have a separate name plate supplied by the unit manufacturer.

2. Safety Instructions

**Danger!**

Do not touch the open valve or the yoke!

Risk of injury due to sudden valve operation.

Risk of injury in dismantled valve state due to sudden valve operation.

- Regular maintenance including the replacement of all seals and bearing bushes must be scheduled in order to prevent leakages and discharge of liquids.
- Before any maintenance work the line system must be depressurized and drained if possible.
- Separate all electric and pneumatic connections.
- Observe the following Service Instructions to ensure safe maintenance of the valve.

**Danger!**

Welded actuators are preloaded by spring force.

**Opening of the actuators is strictly forbidden.
Danger to life!**

Actuators which are no longer used or defective must be disposed in professional manner.

Defective actuators must be returned to your SPX FLOW representative for their professional disposal and free of charge for you.

Please address to your local SPX FLOW representative.

2. Safety Instructions

Installation, connection, start-up, maintenance and repair work must only be carried out by qualified personnel.

The following aspects must be observed:

- The instructions of this manual together with all relevant instructions for the components, equipment and installations installed.
- Warnings and installations fixed to the components.
- The specific regulations for and requirements to the system in which the valve is installed.
- The currently valid regional, national and international regulations.
- Any special requirement and national legislation relative to the use of flammable liquids or tools, e.g. the risk of ignition in case of spark formation, must be observed.

It must be ensured that the group, the category and the temperature class of the valve complies with the minimum requirements of the operating environment!

Inflammable gas mixtures or dust concentrations in connection with hot, operational and movable parts of the valve can lead to serious or fatal injury!

Before start of assembly the operator must make sure that an explosive atmosphere does not exist (detection/measurement of potential concentration of hazardous substances).

Conductive connection to the pipeline must be provided. The integration into the internal potential equalisation must be guaranteed!

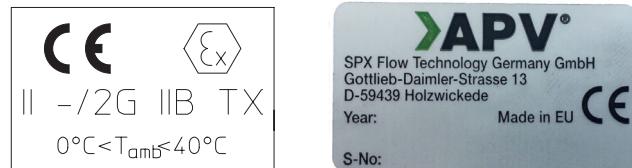

If the valve is used for inflammable liquids, it must be observed that every operating process is combined with an operating leakage. This operating leakage liquid must be discharged in a closed system. The operator must consider this during the examination and classification of explosive atmospheres in the outside area.

The APV CU2, CU3 and CU4 Control Units are not suited for use in ATEX environments!

3. Identification of valves, Temperature classes, Responsibilities

3.1. Identification of valves for use in ATEX environment

ATEX identification:

- Equipment group II
 - Equipment category outside 2G
inside no equipment
 - Explosion subcategory IIB
- Ambient temperature for the operation
 $0^{\circ}\text{C} \leq \text{T}_{\text{amb}} \leq 40^{\circ}\text{C}$
- Temperature classes TX (according to table 3.2)

3.2. Temperature classes and permissible temperatures

Media temperature	$\leq 75^{\circ}\text{C}$	$\leq 95^{\circ}\text{C}$	$\leq 130^{\circ}\text{C}$	up to 140°C = Tmax.
Safety addition	+ 5 °C	+ 5 °C	+ 5 °C	+ 5 °C
Temperature class	T6	T5	T4	T3

Under standard operating conditions the highest surface temperature will be comparably as high as the temperature of the medium plus a safety addition for local temperature increases. The valve must be completely free to the environment in order to provide for sufficient heat release.

All data (temperature classes) refer to an ambient temperature of 0°C to 40°C. If the ambient temperature is above 40°C, the temperature difference must be adjusted. In all cases, contact your responsible SPX FLOW representative!

3. Identification of valves, Temperature classes, Responsibilities

3.3. Responsibilites

It is within the operator's responsibility to ensure that the specified product temperatures are not exceeded and that regular inspections and maintenance are carried out to provide for proper function of the valve.

4. Intended Use

The intended use as field of application of the DELTA SD4 double seal valve is the shut-off of line sections, especially in beverage and food installations.

Its use is permissible only within the admissible pressure and temperature margins and under consideration of chemical and corrosive influences.

Any use exceeding the margins and specifications set forth, is considered to be not intended.

Any damage resulting therefrom is not within the responsibility of the manufacturer.

The user will bear the full risk.

Attention!

Improper use of the valve leads to:

- damage
- leakage
- destruction.

Failures in the production process are possible.

Warning!

The valve is suitable for use in hazardous areas as identified on the valve according to Directive 2014/34/EU.

Arbitrary, constructive changes at the valve will influence safety as well as the intended functionality of the valve and are **not** permissible.

Authorizations and External Evaluations

<https://www.spxflow.com/en/apv/about-us/certifications/>

5. Mode of Operation

5.1. General terms

**SD4 double seal valve
with valve position indication**

The valves are designed for universal applications and stand out for their increased mechanical reliability and absolute ease of service.

The field of application of the DELTA SD4 double seal valves is to shut off line sections which are separated from one another by two seat seals. A leakage chamber is arranged between the seals, the leakage chamber being forcibly closed by the two leakage valves or opened to the atmosphere.

- Operation by pneumatic actuator with air connection, reset by spring force.
- The inner parts of the actuator need not be serviced.
- To avoid pressure hammers, the valve is to be closed against the flow direction of the fluid.
- The SD4 valve is equipped with a valve position indication.

The proximity switches to signal the final position of the valve disc can be mounted to the proximity switch holder (PSH).

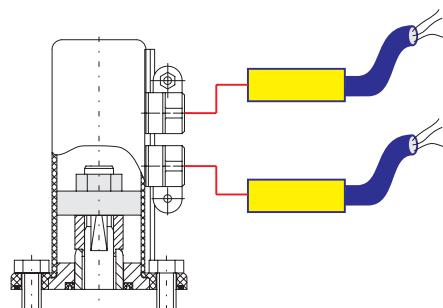

The use of valve position indicators which are approved for the application in explosive atmosphere is compulsory.

The use and operation of valve position indicators shall be evaluated by the operator of the installation!

Assembly, see item 13.3.

Valve position indicator

6. Cleaning

For the cleaning of SD4 valves, distinction is made between two areas.

6.1. The flow chambers

The passages of the valve are cleaned by the cleaning liquid during cleaning of the connected pipelines.

6.2. The leakage chamber (fig. 6.2.)

Cleaning of the leakage chamber is undertaken via the leakage valves. The cleaning liquid is supplied via one leakage valve and discharged to the atmosphere in a closed process via the second leakage valve.

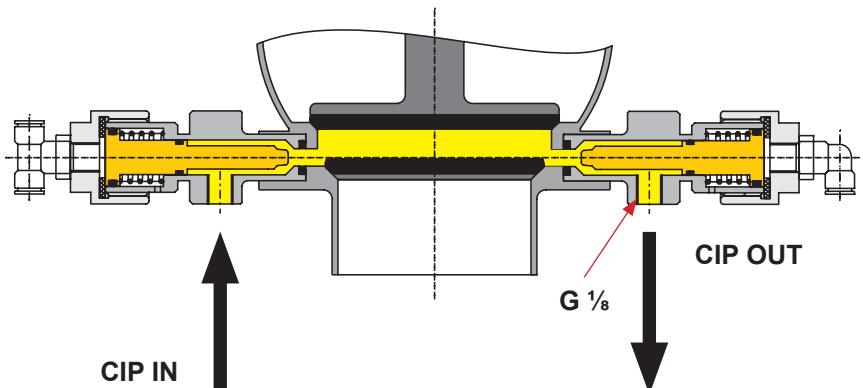

The restraint passage of the cleaning liquid provides for a perfect cleaning of the whole leakage chamber.

- Flushing quantity per CIP cycle: about 1.2 tr / 10 s
- Cleaning pressure at CIP cleaning connection: min. 2 bar
max. 5 bar

Under standard operating conditions, 15 valves DN 25/1" - 100/4" can be cleaned via one spray distribution line DN 25.

fig. 6.2.

6.3. Cleaning (leakage chamber)

Recommendation of cleaning cycles with standard operating conditions and CIP liquids.

Cleaning steps	CIP-spraying
Pre-flushing	3 x 10 sec.
Caustic flushing 80°C	3 x 10 sec.
Intermediate flushing	2 x 10 sec.
Acid flushing	3 x 10 sec.
Subsequent flushing	2 x 10 sec.

6. Cleaning

fig. 6.4.

- Depending on the degree and substances of soiling, cleaning liquids, times and processes must be scheduled for the individual application.

The compatibility of the individually selected cleaning processes and liquids with the respective seal material must be verified.

6.4. Hosing of leakage valves:

AIR IN : air supply.

7. Installation

7.1. General terms

Installation must be undertaken in such a way that liquids can drain off and should preferably be carried out in vertical position.

The valve housing can be welded direct into the pipeline system (completely dismantable valve insert).

Attention! Observe Welding Instructions 7.2.

Conductive connection to the pipeline must be provided.
The integration into the operational potential equalization must be guaranteed!

7. Installation

7.2. Welding instructions

- Before welding of the valve, the valve insert must be dismantled from the housing. Careful handling to avoid damage to the parts is necessary.
- Welding should only be carried out by certified welders (DIN EN ISO 9606-1). (Seam quality DIN EN ISO 5817).
- The welding of the valve housings must be undertaken in such a way that the valve body is not deformed.
- The preparation of the weld seam up to 3 mm thickness must be carried out as a square butt joint without air.
(Consider shrinkage!)
- TIG orbital welding is best!
- After welding of the valve housings or of the mating flanges and after work at the pipelines, the corresponding parts of the installation or pipelines must be cleaned from welding residues and soiling.
If these cleaning instructions are not observed, welding residues and dirt particles can settle in the valve and cause damage.
- Any damage resulting from the non-observance of these welding instructions is not subject to our guarantee.

9. Technical Data

9.1. General data

- Product-wetted parts: 316 L, 1.4404 (DIN EN 10088)
- Other parts: 1.4301 (DIN EN 10088)
- Seals: standard design: EPDM
- option: HNBR, VMQ, FPM
- Max. line pressure: 10 bar
- Operating pressure: depending on actuator
- see pos. 9.6
- Max. operating temperature: 135°C EPDM, HNBR
*FPM, *VMQ
- **Short-term load:** 140°C EPDM,
HNBR *FPM, *VMQ
*(no steam)
- Ambient temperature: 0 - 40 °C
- CIP connection for leakage valves: G1/8
- Air connection (for hose): 6 x 1 mm
- Max. pneumatic air pressure: 8 bar
- Min. pneumatic air pressure: 6 bar

Use dry and clean air, only.

9.2. Compressed air quality

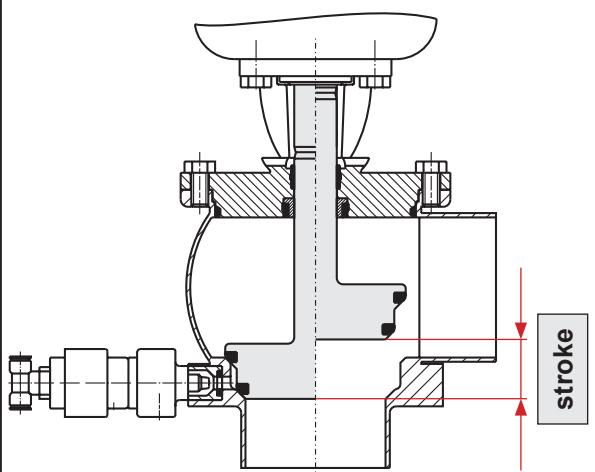

- Compressed air quality: quality class according to ISO 8573-1
- Content of solid particles: quality class 3,
max. number of particles per m³
10000 of 0,5 µm < d ≤ 1,0 µm
500 of 1,0 µm < d ≤ 5,0 µm
- Content of water: quality class 4,
max. dew point temperature - 20 °C
For installations at lower temperatures
or at higher altitudes, additional
measures must be considered to reduce
the pressure dew point accordingly.
- Content of oil: quality class 1,
max. 0,01 mg/m³

The oil applied must be compatible with Polyurethane elastomer materials.

9. Technical Data

10. Maintenance

Scan for SD4 Valve
Maintenance Video

The maintenance intervals depend on the corresponding application and are to be determined by the operator himself carrying out temporary checks.

The valve must not be cleaned with products containing abrasive or polishing material. Especially the valve shaft must not, under any circumstances, be cleaned with such agents. Damage of the valve shaft can lead to leakages.

Required tools:

- 1x wrench SW13
- 1x wrench SW17
- 1x wrench SW19
- 1x wrench SW30
- 1 x hexagon socket wrench 6 mm
- assembly tool for seat seal

(see chapter 15.)

Before start of maintenance and assembly the operator must make sure that an explosive atmosphere does not exist (detection/measurement of potential concentration of hazardous substances). Alternatively, use spark-resistant tools!

Exchange of seals is done according to Service Instructions.
Customer stock keeping of spare seals is recommended.
For valve service actions we supply complete seal kits including seal grease (see spare parts lists).

Assembly of the valve and change of the valve design NC or NO according to Service Instructions.

Attention! Use food-grade grease and special greases being suited for the respective seal material, only!

Recommendation:

APV assembly grease for EPDM, FPM, HNBR and NBR

(0,75 kg/tin - ref.-No. 000 70-01-019/93; H147382)

(60 g/tube - ref.-No. 000 70-01-018/93; H147381)

or

APV assembly grease for VMQ (Silicone)

(0,6 kg/tin - ref.-No. 000 70-01-017/93; H147380)

(60 g/tube - ref.-No. 000 70-01-016/93; H147379)

- ! Do not use grease containing mineral oil for EPDM seals.
- ! Do not use Silicone-based grease for VMQ seals.

Less suited grease types can influence function and service life.

10. Maintenance

Additionally required maintenance for applications in ATEX environment

SD4 Valve

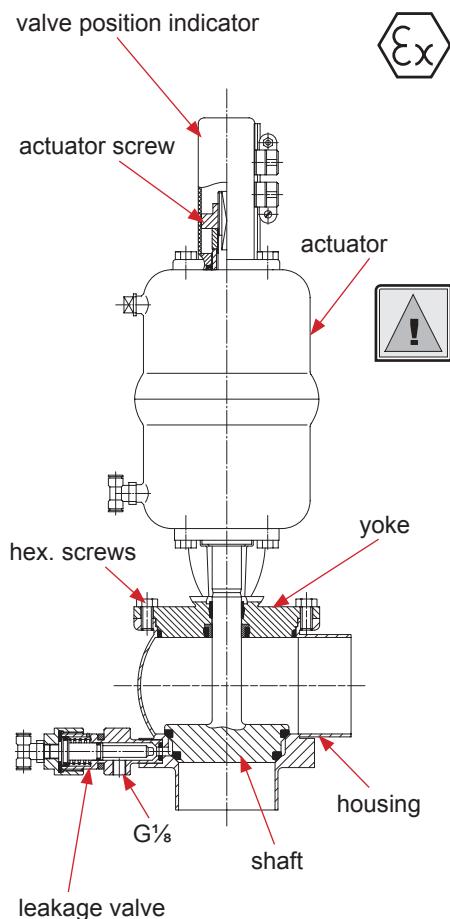

Valve maintenance for actuator with spring	Note
Functional test, visual inspection of valve stroke and control of abnormal running noise of spring	1 x per year
Change interval of actuator	In case of damage, incomplete actuator movement, considerable running noise of spring as well as after 250,000 cycles* as preventive measure, however, after 10 years at the latest

*complies with about 8 years in 1-shift-operation and 10-15 cycles per hour.

11. Service Instructions

**Corresponding spare parts see
Spare parts list: RN ATEX 054.62**

11.1. Dismantling from the line system

Before start of assembly the operator must make sure that an explosive atmosphere does not exist (detection/measurement of potential concentration of hazardous substances). Alternatively, use spark-resistant tools!

1. Shut off line pressure and drain lines if possible.
2. **Valve design NC:** Control actuator with air.
**Do not touch movable parts!
Risk of injury.**
3. Remove hexagon screws and lift valve insert including actuator off the valve housing.
4. Shut off compressed air and remove compressed air supply.
5. Remove valve position indicator.

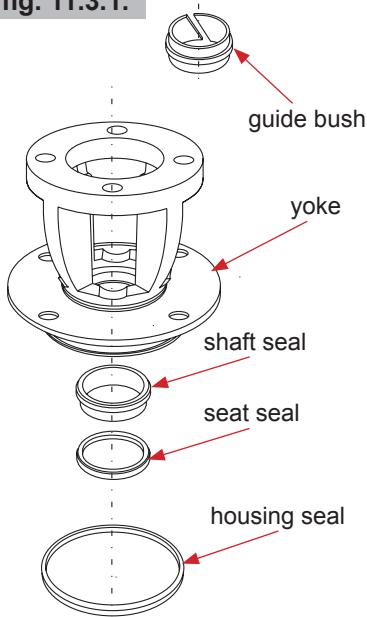

11.2. Dismantling of wear parts (product-wetted parts)

1. Remove housing seal.
2. Release actuator screw from the guide rod.
3. Hold up the centering washer during this process. Remove the centering washer.
4. Pull the valve shaft out of the actuator. Remove the seat seal.
5. Unscrew the yoke from the actuator.
- Actuator can be maintained.
6. Detach the seat seal, shaft seal and guide bush.
7. Clean the valve housing, yoke, actuator and shaft with a low solution of a cleaning agent. Never use cleaning agents containing abrasive or polishing particles.

11. Service Instructions

11.3. Installation of seals and Assembly of valve

fig. 11.3.1.

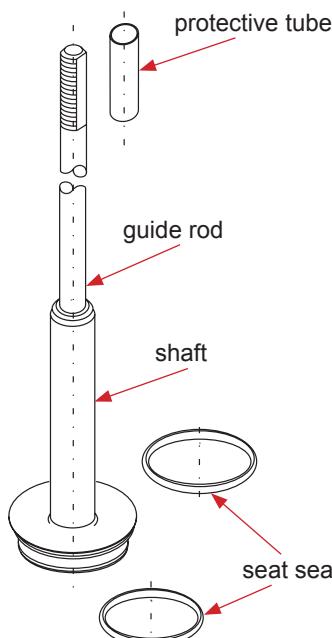

1. Insert the guide bush into the yoke.
Afterwards, insert the shaft seal and press in the slightly greased seat seal (see fig. 11.3.1.). See to the correct installing position.
2. Install the yoke at the actuator.
3. Insert the seat seal into the shaft. Use the assembly tool to install the lower seat seal (see chapter 15). Grease the seat seal only slightly before its installation.
In case of manual installation, vent the seal groove with a thin object between the seal and groove wall.
4. Install the protective tube via the thread of the guide rod.
Slide the shaft through the yoke and actuator. Place centering washer and tighten the actuator screw on the guide rod.
Hold up the centering washer during this process.
Tightening torque 40 Nm.
5. Slightly grease the housing seal and place it in the groove of the yoke.
6. Fasten the valve position indicator.

11.4. Installation of valve

1. Connect compressed air supply.
2. Valve design NC : Control actuator with air.

Do not touch movable valve parts!
Risk of injury by sudden valve operation.

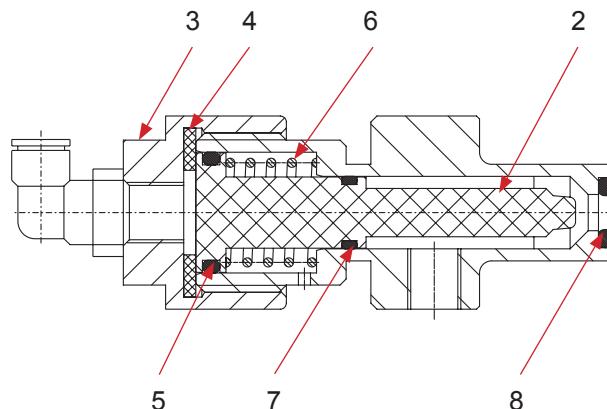

3. Place the valve insert carefully into the housing.
The housing seal must not be damaged during the installation.
Tighten the hexagon screws crosswise in the housing flange.
4. Valve design NC: Shut off compressed air.
5. Check the basic adjustment of the valve position indication if necessary.

12. Service Instructions - Leakage valves

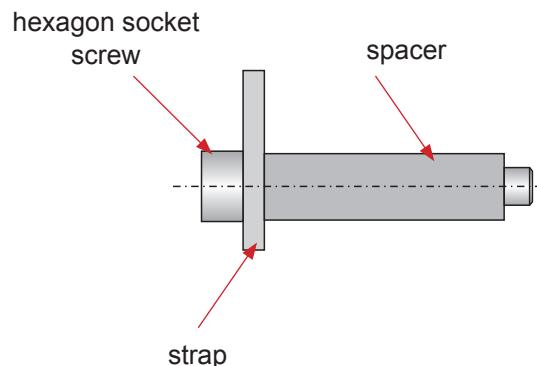

12.1. Maintenance of leakage valves

The item numbers refer to the corresponding spare parts list
leakage valves SD4 RN: 01.054.67

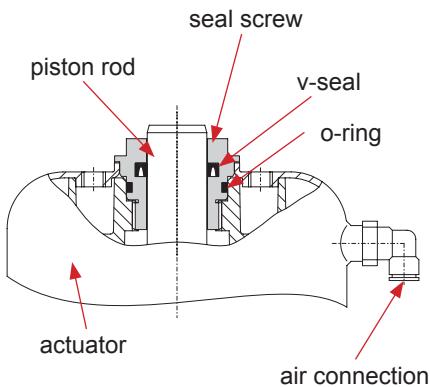

1. Disconnect the pneumatic air hoses at the two leakage valves.
2. Shut off and discharge the CIP supply line.
3. Remove the CIP supply and discharge lines from the leakage valves.
4. Release the hexagon socket screw and remove the strap. Pull the leakage valves out of the housing flange.
5. Pull out the cap (3), piston (2) and spring (6).
6. Dismantle all seals (5, 7, 8).
7. The assembly is undertaken in reverse order.

Support for leakage valves

13. Service Instructions - Actuator

fig. 13.1.**Spare parts list: RN01.054.86****13.1. Maintenance of actuator (fig. 13.1.)**

1. Remove the air hoses from the actuator.
2. Unscrew the two seal screws with a spanner SW30 while holding up the actuator with a strap wrench.

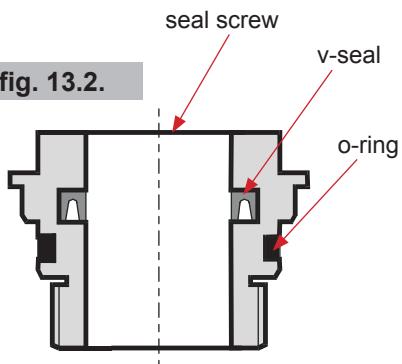

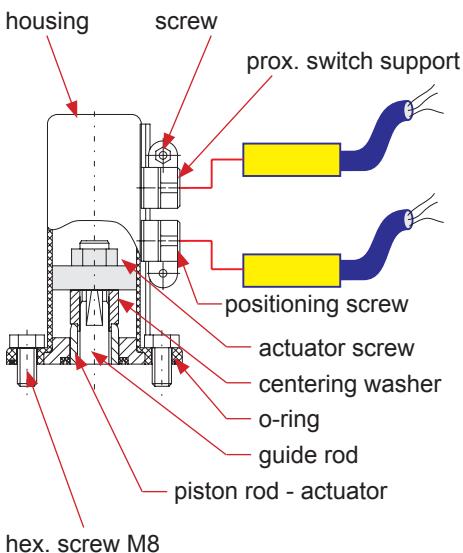

13.2. Installation of seals and Assembly of Actuator

1. Install the greased o-rings and v-seals in the seal screws (fig. 13.2). See to the correct installing direction of the v-seal.
2. Slide the seal screws over the piston rod at both sides of the actuator and tighten them.
3. Fasten the yoke on the actuator.

Attention: Consider the required valve design
NC or NO during the installation of the yoke.

NC = normally closed / air-to-raise, spring-to-lower
NO = normally open / air-to-lower, spring-to-raise

4. Fasten the air hoses.

fig. 13.2.**fig. 13.3.****13.3. Actuator with valve position indicator
Assembly of holder (fig. 13.3.)**

1. Install the actuator screw on the actuator.
2. Provide the housing with the o-ring.
3. Fasten the housing by means of the 4 hex. screws M8 on the actuator.
4. Release the screws at the proximity switch holder and insert the corresponding proximity switches. Then fasten the screws.
5. Place the actuator in one limit position.
6. Place the corresponding proximity switch in the corresponding position. Release the positioning screw and move the holder until the corresponding signal is indicated. Then continue the movement by 2 to 3 mm to secure indication. Fasten the positioning screw.
7. Place the actuator in the other limit position and carry out positioning of the second proximity switch.

14. Reconstruction of Actuator

With SD4 valves, the size of the actuator can be changed.

Observe the respective line pressure, see table 9.6,
to increase or decrease the actuator sizes
(Ø 74 mm, Ø 110 mm, Ø 165 mm).

14.1. Reconstruction of actuator

Disassembly

Disassembly is carried out as described in chapter 11.

To change the actuator size, the respective guide rod
must be replaced:

Attention!

Clamp the valve disc in a vice.

The valve disc must not be damaged (use protective cheeks or
cleaning rags).

Even inferior damage at the shaft rod can lead to leakages.

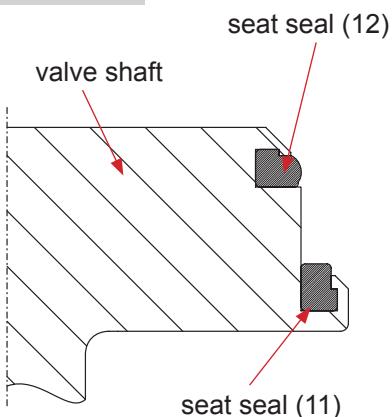

Turn the guide rod out of the shaft by means of the centering
washer and a wrench SW17.

14.2. Assembly of actuator

1. Turn the respective guide rod into the shaft to the actuator.
Tightening torque 40 Nm
2. Further assembly is undertaken in reverse order.

15. Installation of Seat seal

fig. 15.

By means of the assembly tool, the seat seal (11) can be installed, only (see fig. 15). At first, this seat seal must be mounted onto the valve shaft.

Afterwards, the seat seal (12) must be manually inserted into the groove, see item 15.2.

The assembly tool (fig. 15.1) consists of:

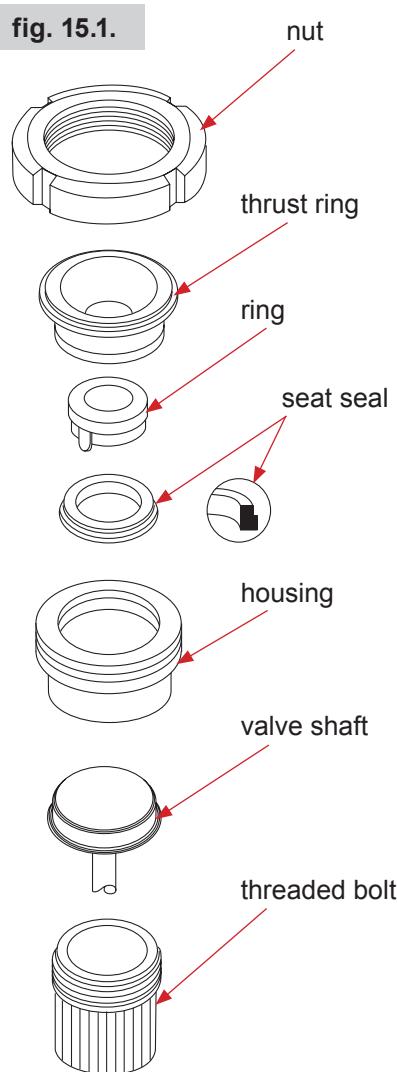

- nut
- thrust ring
- ring with venting nose
- housing
- threaded bolt

15.1 Installation of seat seal in the valve shaft

1. Insert the valve shaft into the housing in such a way that the seal groove is in the housing.
2. Clamp the shaft into the housing by means of the threaded bolt. Clamp the housing into a vice.
3. Slightly grease the seat seal with APV assembly grease. Then install the seal on the ring with the venting nose until it stops.
4. Introduce the ring with the installed seat seal into the housing and press it down until it stops sensibly.
5. Insert the thrust ring into the housing. Screw on the nut and tighten it with a hook spanner until it stops.
6. Release the nut. Take ring and thrust ring off the housing.
7. Take housing out of the vice, take off the threaded bolt. Detach the valve shaft from the housing.

Check the even fit of the seat seal.

To simplify the installation of the seat seal, the following assembly tools are available:

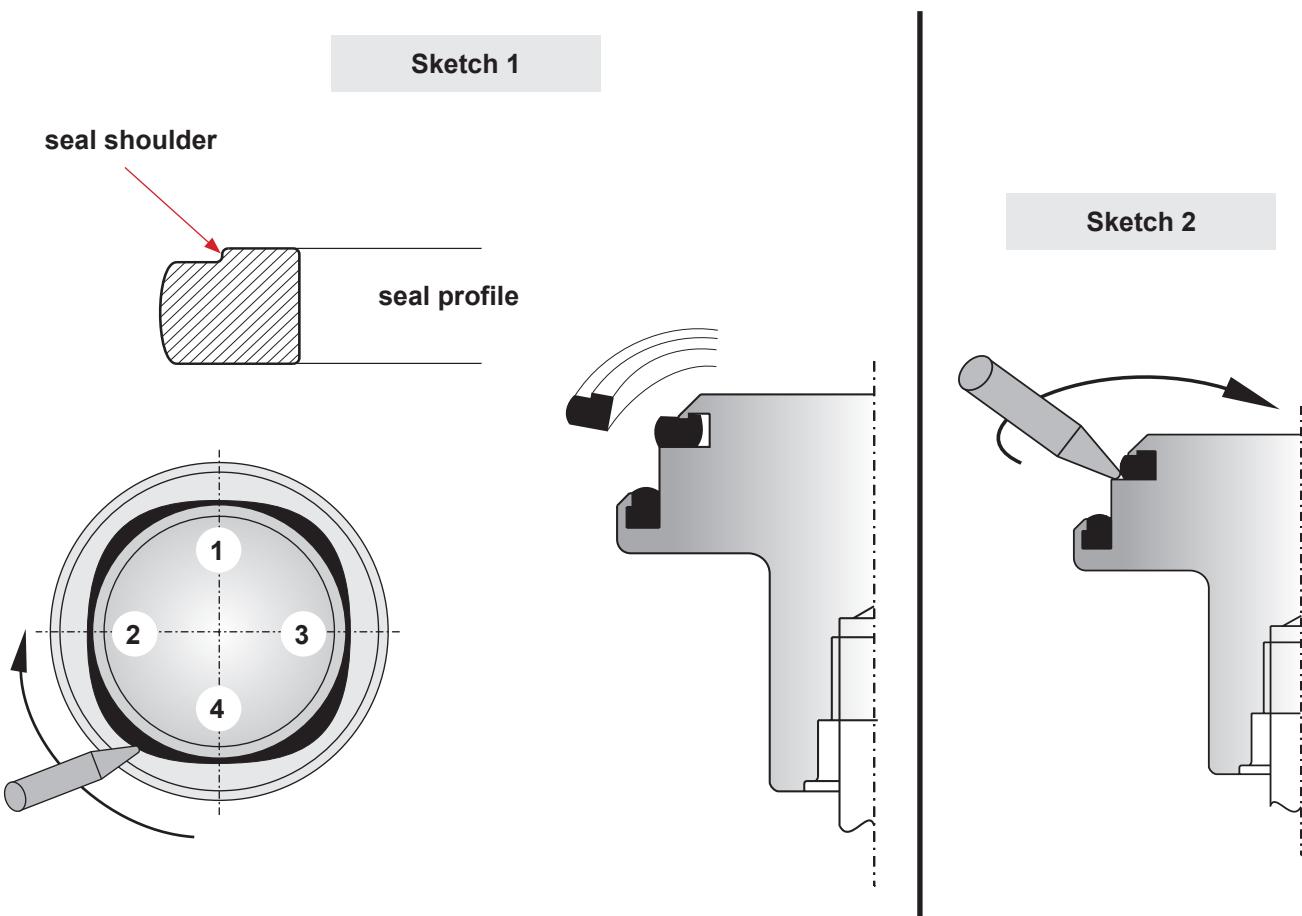

Assembly tool for seat seal

DN	Inch	Reference No.	ID No.
25	1"	000 51-13-200/17	H203861
40	1,5"	000 51-13-201/17	H203862
50	2"	000 51-13-202/17	H203863
	2,5"	000 51-13-203/17	H203864
65		000 51-13-204/17	H203865
	3"	000 51-13-205/17	H203866
80		000 51-13-206/17	H203867
100	4"	000 51-13-207/17	H203868

15. Installation of Seat seal

15.2. Manual installation of seat seal (pos. 12)

1. Before assembly, the seat seal must be provided with a thin layer of grease. The receiving groove for the seat seal must not be greased.
2. Clamp the valve shaft in a vice.
The valve shaft must not be damaged.
Use protective braces.
3. Press the slightly greased seal at four spots with the wide side to the front into the receiving groove (**see sketch 1**).
4. Use the assembly tool (or screwdriver with rounded edges) to press the seal at four opposite spots 1-2, 3-4 into the groove (**see sketch 1**).
5. Press the seal step by step into the groove. Work alternately at opposite spots. See to an even fit of the seat seal.
6. At the end, place the assembly tool between the seal shoulder and the groove wall. Work all around the circumferences of the groove. The groove bottom is vented and the seal shoulders are locked in place by this process (**see sketch 2**).

16. Trouble Shooting

Failure	Remedy
Valve is untight, leakage via leakage valves	Replace seat seal. Check line pressure: Admissible line pressure see chapter 9.
Leakage at leakage valve cylinder	Replace o-rings. see RN 01.054.67 Check cleaning liquid supply.
Leakage between housing and yoke flange	Replace housing seals.
Actuator	
Air escapes at the actuator rod.	Replace complete seal screw for actuator.
Actuator does not work (air escapes permanently from the venting plug).	Replace the complete actuator.
Valve position indication	
No feedback.	Carry out fine adjustment.

17. Spares Parts Lists

The reference numbers of the spare parts for the different valve designs and sizes are included in the attached spare parts drawings with corresponding lists.

Please indicate the following data to place an order for spare parts:

- number of required parts
- reference number
- designation
